3336^G

Rates for Nursery Container Applications

3336^G was originally formulated for turf applications at the rate of 3 pounds per 1,000 square feet (lb/MSF). This product is also very effective as a "dry" drench for container nursery operations in an early spring or late fall treatment when containers are jammed for winter. This material can then be applied over-the-top using a broadcast spreader.

3336^G used at the rate of 22.5 to 30 lb/MSF is the equivalent of a liquid drench rate. While this material is a bit more expensive than the WP or F formulations, labor costs are saved by being able to apply over-the-top with a broadcast spreader. This then becomes a less costly alternative at a time of the year when labor is reduced and time management is more critical.

3336^G Broadcast Over-The-Top Calibration Table

One 30 pound bag will cover the following areas at the listed rates.

22.5 lb/MSF		30.0 lb/MSF	
Bed/Bench Width (feet)	Travel Distance (feet)	Bed/Bench Width (feet)	Travel Distance (feet)
7.0	190	7.0	143
8.0	167	8.0	125
9.0	148	9.0	111
10.0	133	10.0	100
11.0	121	11.0	91
12.0	111	12.0	83
13.0	103	13.0	77
14.0	95	14.0	71
15.0	89	15.0	67
20.0	67	20.0	50
